

PENDULUM WEBINARS

As one of the most versatile risk management tools available, webinars can meet the needs of in-service training on the topics that an organization chooses—from general risk management practices to a specific subject of interest.

Pendulum offers custom webinars designed specifically for an organization. Working with a Pendulum Risk Control Consultant, the organization outlines what is needed, and then the consultant creates a webinar to meet that need. Often the consultant will use actual examples from the organization to highlight the positive or negative aspects of a topic.

Some of the webinar topics Pendulum has produced include:

- Fall Management
- Wound Management
- Documentation
- Customer Service
- COVID-19
- Active Shooter
- Resident/Patient Safety
- Incident Management

Available live or recorded, Pendulum webinars are an excellent tool for any healthcare organization's arsenal, be it senior housing, home health care, or allied health—Pendulum has a webinar just for you!
